From the people that power AMOS™

No one is better qualified to help you get the best out of your AMOS™ application than the people behind it – SpecTec. The range of services we offer alongside AMOS™ means you can tailor your software to provide exactly what your business needs, whether it's customized modules and reporting, integration with other systems, data migration and management or training, for even greater efficiency and cost savings.

“Our customers trust us to support their asset management needs owing to our focus on the specific needs of their business and our expertise in everything AMOS™. Our 40 year heritage means they know they can rely on us when it matters most.”

Chris Hadley
SpecTec

The top 5 benefits for your business

A system that's more in-line with your business needs and processes

Long-term savings in cost and time

Increased efficiency and productivity

Improved decision-making

A better user experience

The services we offer

As we offer such a wide range of services to support you and your AMOS™ system, we've made it easier to find what you need by grouping them together.

Customization & Integration Services

These make sure your system is customized and tailored to give you exactly what you need from it and to connect seamlessly with other tools and data you use, to guarantee smooth and efficient day-to-day operations.

Data Management Services

Here, our experts build, maintain and harmonize your data to make sure you have an up-to-date, efficiently-run database at the core of your operations, to give you added efficiency and a competitive edge.

Data Migration Services

We'll take all the hassle out of the time-consuming, complex task of moving ever-evolving data, making sure the process goes smoothly and seamlessly with minimal disruption to your day-to-day activities.

Customization & Integration Services

Customization & Integration Services

Module Customization

Here, our team will enhance or customize an existing standard AMOS™ module or module filter, or design, develop, test and implement a new module specifically for your system. That means you get unique AMOS™ modules built just for you, giving you the data you need in a single view, seamless integration with your other systems and more satisfied customers and employees.

Custom Reports Development

We can enhance your existing standard reports or design custom reports from scratch just for you, as well as customizing your report filter criteria. These can be branded based on your templates, and ready to drop into board presentations – leading to better customer satisfaction and saving you time and money.

Integration Interface

Our team has the ability to develop standalone applications so any third party systems you're using can be integrated into your AMOS™ set-up, so data can be exchanged between them using Interim DB, CSV, XML, JSON, Web API and so on. That brings smooth data flow from one system to another, improved reporting and analytics and increased efficiency – with your AMOS™ data integrated and aligned with your business processes, finance systems and other databases.

AROR as Interface with Third Party Software

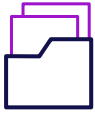

An alternative method of integration, we can configure AMOS™ Replicator as the interface software between AMOS™ and any third party software running on MSSQL, ORACLE or Sybase databases. With structured and monitored synchronization between your third party software and AMOS™, your vessel and office data will be totally in sync with no need for a direct connection, as the synchronization is based on files.

Data Management Services

Data Management Services

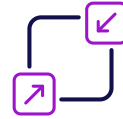

Database Ageing

Our team can easily remove and archive data older than a given date, usually based on regulatory bodies no longer needing to examine data beyond a certain age, so it doesn't need to be readily accessible. Reducing your database in this way improves efficiency and means you're working with accurate, up-to-date information, with no old data to slow you down.

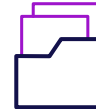

Database Pruning

Once regulatory bodies no longer need to see it, we can remove vessel data from your database that's no longer managed by you and archive it – so your database size is reduced, performance is improved and you avoid a highly time-consuming exercise.

AMOS™ Business Suite & Enterprise Management Suite Data Harmonization

If your offices use a mixture of AMOS™ Business Suite (BS) and AMOS™ Enterprise Management Suite (EMS), we can centralize your database to one single office at group level. This brings all your information together, with consistent data across all your offices and vessels, with a database that's easier to manage and more accessible.

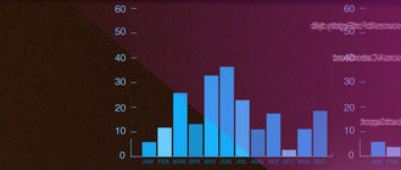

Training Database Implementation

We can create a duplicate database that allows you to train your team to use AMOS™, without any risk of deleting, overwriting or amending critical data. It means users can self-train, boosting their confidence and increasing efficiency and productivity. Your duplicate database can also be refreshed periodically, so users are being trained with up-to-date information, and used to try out changes to procedures with minimal risk.

Data Migration Services

Data Migration Services

Third Party Software to AMOS™

Our team is able to smoothly migrate any third party ship management software based on DBMS MSSQL, ORACLE or Sybase or Excel files to your AMOS™ BS/EMS databases, with minimal disruption to your operations.

AMOS™ Office Migration to Cloud

Our people are experts at configuring or migrating your AMOS™ EMS/BS Office database on a Cloud environment (e.g. MS Azure) – this also includes using AMOS™ Replicator for data synchronization between your offices and vessels. It means you'll have the agility and flexibility of a cloud-based system that can be readily accessed from anywhere over the internet, with easily scalable hardware resources and upgrades.

AMOS™ Database to DBMS Migration

We can easily convert your AMOS™ BS/EMS databases to your preference of Sybase ASA, SQL Server and ORACLE – for example, if you're using Sybase ASA database, we would propose migrating to SQL Server or ORACLE for better performance and security. This gives you a database that matches your exact business needs, with scalability, better system performance and improved compliance and security.

Ready to get the most from AMOS™? These are the people to talk to.

Whichever part of the world you're operating in, we have experts on the ground ready to discuss the services you need to help you maximize the value of AMOS™.
